

Ben Sturtevant is realizing major financial success with the hottest trend in the home business industry: **WIRELESS**

# GO WIRELESS for the biggest income

Most business professionals know it pays to get ahead of a trend. Just think of the fortunes made by those who invested in Apple and Microsoft stocks decades ago. But do you know what else it takes to make a business really lucrative? Ben Sturtevant does, and he's got the only home-business opportunity that's letting average people take advantage of the world's most powerful new source of income: the wireless industry.

Led by a rock-solid company with years of leadership experience, Ben's team has taken the wireless world—including cell phone and Internet service—and put it in the hands average individuals. Best of all, the opportunity boasts all the things Ben knows are needed for a successful business: stable company leadership, a product people truly want, a lucrative compensation plan, an unbeatable system, and impeccable timing.

Ben has been in the industry for 12 years, giving him the experience to recognize a realistic opportunity when it comes along. So when the Internet began to pick up speed, he knew he had to get on board. "Wireless technology is the hottest industry out there," he explains. "There are over 270 million wireless users, and that's just in America. We are the only company that has our own wireless product, and it's backed by the nation's largest,

most reliable wireless network." More importantly, the services Ben and his team provide are already being used by millions of people. "Everyone in the country is already using a cell phone; they're already using the Internet," he says. "It's the easiest conversation you'll ever have."

As for the compensation plan, Ben's team enjoys huge upfront cash bonuses, luxury car bonuses, a travel expense account, and true residual commissions. The company's proven system is also backed by an income guarantee. But don't expect to find this kind of opportunity elsewhere. "We're the first and only company in the U.S. to offer people an opportunity to earn a residual income on wireless," he says. "It's a \$150-billion industry, and we're the only home business that's capitalizing on the opportunity. There's no competition."

"This is something I believe anyone could succeed in," he continues. "Hundreds of billions of dollars are already being spent on these services. You might as well be getting paid for it. There's a kind of no-brainer brilliance to it." **TW**
